Research Assistant:
SFB1574

What Is An SFB Project?

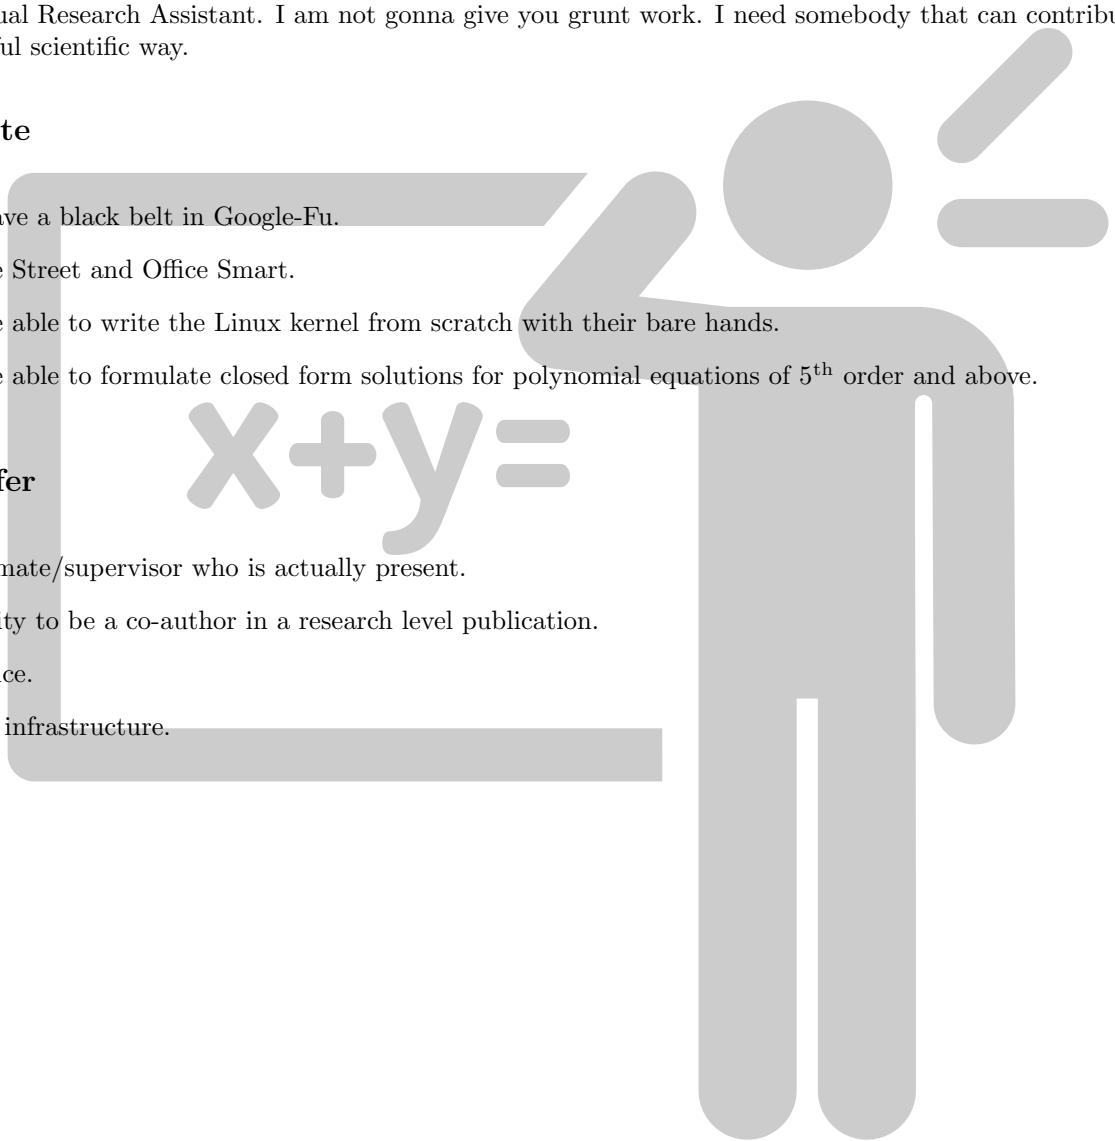

SFB (Sonderforschungsbereiche or Collaborative Research Centres) are long-term research projects funded by the German Research Foundation (DFG). They enable interdisciplinary collaboration across institutions, focusing on ambitious, cutting-edge scientific goals. Held in high regard, SFBs signify research excellence, strong institutional support, and sustained funding—typically up to 12 years. They bring together top researchers, foster innovation, and often lead to significant scientific breakthroughs. Hosting or participating in an SFB boosts the reputation of both researchers and universities, highlighting their leadership in a field. Their rigorous selection and evaluation process ensures only the most promising and impactful projects receive funding.

Responsibilities?

I need an actual Research Assistant. I am not gonna give you grunt work. I need somebody that can contribute to my project in a meaningful scientific way.

Prerequisite

- Must have a black belt in Google-Fu.
- Must be Street and Office Smart.
- Must be able to write the Linux kernel from scratch with their bare hands.
- Must be able to formulate closed form solutions for polynomial equations of 5th order and above.

What I offer

- A teammate/supervisor who is actually present.
- Possibility to be a co-author in a research level publication.
- Nice office.
- Nice IT infrastructure.
